Take the data. Leave the paper.

ABBYY FlexiCapture powerful data capture software that works with precision accuracy to convert paper and image documents into business-ready data. ABBYY FlexiCapture automates resource-consuming tasks such as data entry, document separation and classification to significantly reduce the time it takes to deliver the data to business processes.

Single entry point for documents of all types

With intelligent capture algorithms, ABBYY FlexiCapture processes and extracts data from business documents of any complexity, including invoices, purchase orders, insurance claims, agreements, forms and more.

Auto-learning and classification

ABBYY FlexiCapture uses artificial intelligence algorithms to perform automatic classification and data extraction. The new interactive autolearning feature uses image samples to train the program to recognize different document types and find data fields on them.

Premium-quality data output

ABBYY's widely acclaimed OCR, ICR, OMR and data capture technologies and automated validation rules deliver accurate data to business processes in the shortest timeframe.

Distributed document capture

Scanning documents right at the point where they originate and quickly delivering them to back-end systems is easy with the Web Capture Station.

On-demand scanning and verification can be performed remotely from any location and any computer in a light browser-based interface.

Scalability and fault tolerance

The robust client-server architecture with multi-CPU support and automatic load balancing provides optimum processing performance in high-volume projects. Microsoft® Cluster Server support ensures consistent system operation and prevents data loss in the event of a system failure.

Extensive language support

ABBYY FlexiCapture processes documents in more than 180 languages, including Arabic, Chinese, Japanese, Korean and Vietnamese. For hand-printed recognition, ABBYY FlexiCapture supports 113 languages.

Flexible integration and customization

ABBYY FlexiCapture offers a complete set of tools for modifying document processing workflows with custom stages, scripts and external modules. The data capture piece can be integrated into existing workflow processes as a Web Service.

ALL INDUSTRIES, ALL DOCUMENTS, ALL DATA

Government

Achieve the highest government levels for security, reliability, scalability and efficiency by automating document-driven business processes.

- Eliminate manual labor-intensive key entry
- Accelerate business processes
- Get more accurate and timely results

Telecom

Streamline client registration and accounting with the advanced flexicapture technology by converting ID cards and other paper documents to electronic formats.

- Increases customer loyalty through better service and faster reaction times
- Increase throughput without increasing staff
- Improve compliance and risk management through real-time monitoring and tracking

Logistics

Establish efficient operations and quick transactions by implementing automated and accurate processing and archiving various shipping documents.

- Leverage early payment discounts
- Increase accuracy of financial data
- Enhance financial reporting capabilities

BPO

Scan, convert, verify, index and export searchable PDFs and office formats to backend business systems

- Gain an edge on your competition with unrivaled processing power
- Ensure the highest quality output even in high-volume processing environments
- Support industry standard document output for records management and archiving
- Offer 24/7 round-the-clock conversion for time-critical client tasks

And More

ABBYY FlexiCapture

Product Information

ABBYY FlexiCapture – a single package with double value

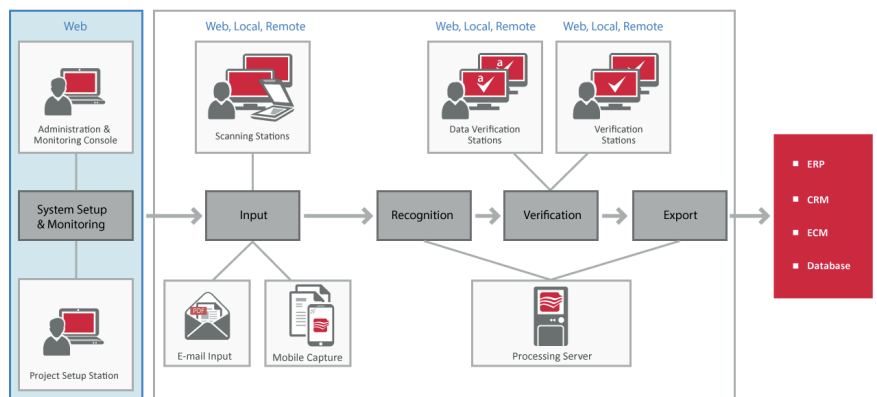

ABBYY FlexiCapture is a highly scalable enterprise solution for converting streams of documents into business-ready data. FlexiCapture is available in two different variants including a workgroup based variant for departments and a client-server based capture platform for distributed data capture in large organisations. FlexiCapture scales with specific needs from low volume data capture based on a standalone installation to high-volumes in a distributed client-server solution. FlexiCapture is available as follows:

	Standalone	Distributed
Architecture	Desktop/Workgroup	Client-Server
Usage	Small organisations	Medium to large enterprises
Components	All tasks handled on a desktop machine (local operations)	Capture solution for scanning, recognition, validation and release (remote operations and Web Capture Workflow)
Deployment	Desktop installation (One Administrator only)	Client-/Server solution with multiple components and for task distribution between servers and stations (Operator, Setup, Administrator)
Scalability	Limited by desktop workstation	High scalability based on Client/Server architecture
Distribution	Operated only on physical machine or virtual environment	Servers can be installed in a virtual environment, client operator stations can be accessed via the web browser

ABBYY FlexiCapture: Standalone

ABBYY FlexiCapture: Distributed

Highlights. ABBYY FlexiCapture.

- Enterprise Capture solution for processing any kind of document
- Classification of the incoming document stream
- Completely web-based capture workflow for distributed capture and verification scenarios
- Customisable capture workflow that allows processing of paper, fax and e-mail
- Integration into line of business applications
- Early and clear visibility of any incoming document
- Better regulatory compliance through monitoring and reporting
