Timeless Colours That Endure

The new imagePROGRAF PRO-510 equipped with 12-colour pigment inks, enhances black density and delivers richer colour expressions in every print.

The LUCIA PRO II* ink system brings a new level of excellence to the imagePROGRAF PRO series, offering significant improvements in print quality, durability, and longevity.

*Applicable to PBK, C, M, Y, PC, PM, GY, PGY, R, B, CO inks.

LIGHT RESISTANCE

LUCIA PRO II inks feature an improved light-resistant pigment for exceptional colour preservation, ensuring prints maintain their vibrant colour quality for up to 200 years* without fading.

**When using Photo Paper Pro Platinum (PT-101). Predicted values calculated in accordance with the indoor lightfastness test method and life criteria of the preservability evaluation method for digital colour photographic print images (JEITA CP-3901B) issued by the Japan Electronics and Information Technology Industries Association (JEITA).*

SCRATCH RESISTANCE*

The improved scratch resistance minimises potential damage from printing processes or mishandling, particularly on glossy or semi-glossy prints, ensuring that your printouts remain in pristine physical condition.

**Not applicable for non-glossy media.*

SUPERIOR PRINT QUALITY

The new formulation of matte black ink significantly enhances black density, delivering deeper and richer black tones. It also improves colour reproducibility in dark areas, resulting in fine gradation details that add depth and dimension to your prints.
